

Whether you are duplicating audio, video, data, software, photos or any other digital information, the appearance of your digital output is a direct reflection of your company. Make a positive, lasting impression with Primera's printable CD, DVD and Blu-ray media. All Primera certified inkjet-printable media are the ideal choice for discs printed on Primera's Disc Publishers, where full process colour is used to add impact and/or functionality to the disc appearance. The following media are designed for high resolution printing on on-demand disc printers.

White Gloss Media

CDs/DVDs WaterShield

WaterShield is a highly water- and scratch-resistant glossy inkjet coating, especially made for discs that need great impression and photo-realistic printout. Its very white coating is perfect for full-colour photo-realistic printing. Custom graphics won't wash away and the glossy finish can cover the entire disc surface up to the center hub.

CDs/DVDs/BDs WaterSafe

WaterSafe is a water- and scratch-resistant glossy inkjet coating, especially made for disc producers that want to print with low saturation printing settings but still archive a really good impression. It gives your printed disc a very vibrant colour appearance with a high gloss finish that can cover the entire disc surface up to the center hub.

White Matte Media

CDs/DVDs/BDs with matte coating

Matte inkjet coated media are especially made for discs with informational text and graphic design. They utilise a water- and scratch-resistant matte coating. The main feature of the matte surface is the fast-drying time and high quality prints even with low saturation printing settings. But there's no need to make concessions, the white matte media can cover the entire disc surface up to the center hub, too.

CDs

	Article No.	Description	Quantity
	C-CDR80WPP-SK	CD-R (700 MB) Inkjet printable TuffCoat White Matte	100 disc bulk (print area up to 22 mm inner ring)
